0. SUMMARY OVERVIEW, MARKET UPDATE

RECENT DEVELOPMENTS – Marketing year 2019/20

1. As expected from a moderate crop, prices during the ongoing campaign are moving within ranges significantly above the average price for the historical reference 5 year period. During recent weeks EU demand seems to be at good levels and provisional EU average March '20 prices are 22% above the reference period average.
2. When comparing to the difficult preceding marketing year (excess of supply in some Member States, especially in Poland) a very important price recovery was observed. Marketing year 2019/20 started the 1st of August. According to Wapa/Prognosfruit the new crop is relatively small (-20% on preceding year and -11% below 5 year reference average). In this context average prices for the new crop are expected to go far beyond the 5 year average).
3. The remaining stocks from the preceding crop were rather high but there was small impact from these stocks since represent just 4,6% of the average crop. EU apple stocks on 1.12.2019 were at the lowest of the last 7 years.
4. The EU price average is significantly above the reference average. At Member State level, however, situations diverge to some extent:
 - prices in PL had a major positive change from previous very low levels;
 - FR prices are above reference average but lower than the preceding campaign (this is an exception to the rule, France increased production during this period);
 - DE prices were above average;
 - IT prices recovered gradually from a difficult end to the previous marketing year and stabilized slightly above reference levels,.
5. During the ongoing campaign there are two important factors to look at that are fundamental for EU prices and farm incomes:
 - a) internal EU;
 - b) the EU dynamism in the use of all possible extra-EU export opportunities.
6. Weather factors are also to be observed carefully because of their influential weight in quality (sugar content, taste, colour...) and especially as a major element that will determine whether or not the crop can be stored for a long time in excellent quality conditions.

Further detail

World consumption of fresh apples 2019/20 (volume)

GENERAL REMARKS AND DISCLAIMERS

1. Where the EU is listed it should be read as "EU+UK" since 1 February 2020.
2. Due to different timings of data processing in different slides and some other factors, such as the intermediate data carrier and methodologies, some differences on figures referred to similar or almost identical indicators are possible.
3. This a working document intended for reflection and analysis not containing any official position of the European Commission.

The end

Thank you
