- 5. Export diversification

0. <u>SUMMARY OVERVIEW, MARKET UPDATE</u> RECENT DEVELOPMENTS – Marketing year 2020/21

- 1. EU average apple prices remain relatively stable with a slight increase that is similar to the seasonal pattern.
- 2. During the ongoing marketing year prices remain firm above the historical reference period, as expected, due to a « small » crop, especially in France and Poland (fresh product). Although the fresh market is doing well, some tensions are observed in the market of apples for processing in Poland with high levels of supply (the opposite in France); there is a relatively higher proportion of apples of lower quality or damaged by extreme weather events that can only go to the industry, especially in Poland.
- 3. The new marketing year (2020/21) started on 1 August 2020. WAPA/Prognosfruit delivered production forecasts for 21 Member States. The volume of the EU27 crop is estimated to be around 10 585 thousand tonnes; the UK represents around 2% of the EU27 crop. We have indications pointing to a fresh volume of the Polish crop even smaller than initially expected for reasons of extreme weather events and absence of sufficient labour connected to the sanitary crisis.
- 4. The volume of the new crop is 1% below the preceding « small » crop and 7% less than the 5 year reference average.
- 5. Given the small incoming volumes confirmed for the new crop, Stocks during the ongoing campaing should remain at moderate (low levels in France an Poland).
- 6. Trade: during the ongoing period 2020/21 (Aug to Dec), exports and imports were respectively 6% and 2% below the 5 year reference period average.

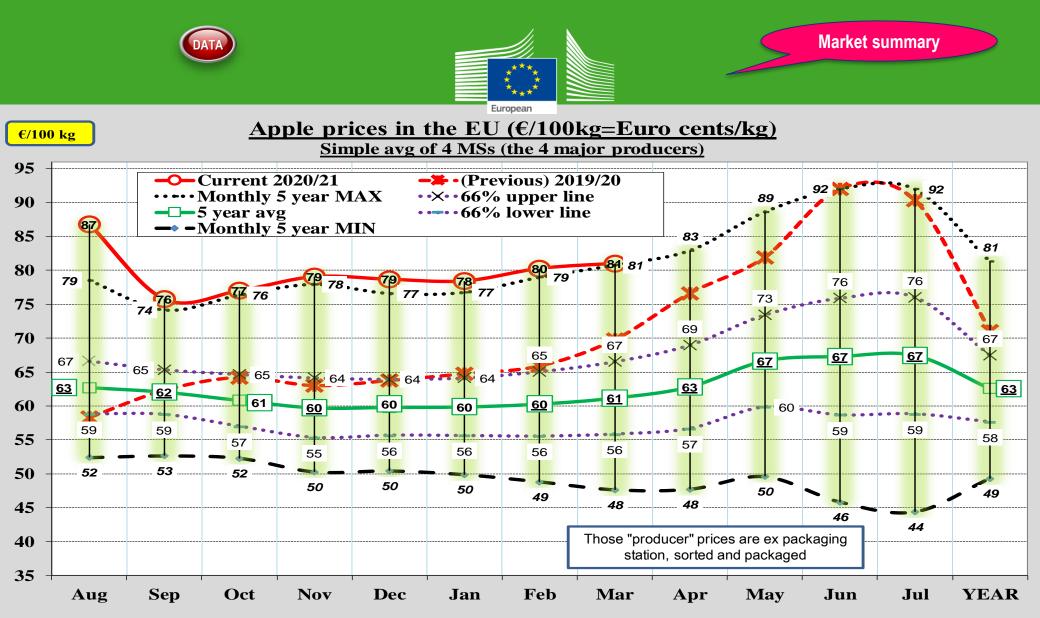

1. PRICES

1.1. EU Prices

- 1.2. MS prices for major producers
 - * Poland (1st EU28 volume producer)
 - * Italy (2nd)
 - * France (3rd)

PRICE ANALYSIS (SHORT TERM), AN EXPLANATION BY EXAMPLE

What is found in the colums of montly price figures?

- 1. Column A: average monthly prices for August 2020 by Member State and in the EU;
- 2. Column B: average monthly prices for September 2020 by Member State and in the EU;
- 3. Column C: index of prices for August 2020 compared to the average prices of the 5 preceding years (base = 100);
- 4. Column D: index of prices for September 2020 compared to the average prices of the 5 preceding years (base = 100);
- 5. Column E: percentage change of prices in September compared to August for the average price of the 5 preceding years (<>seasonal factors);
- 6. Column F: percentage change of prices in September 2020 compared to August 2020.

Example for German prices (September 2020)

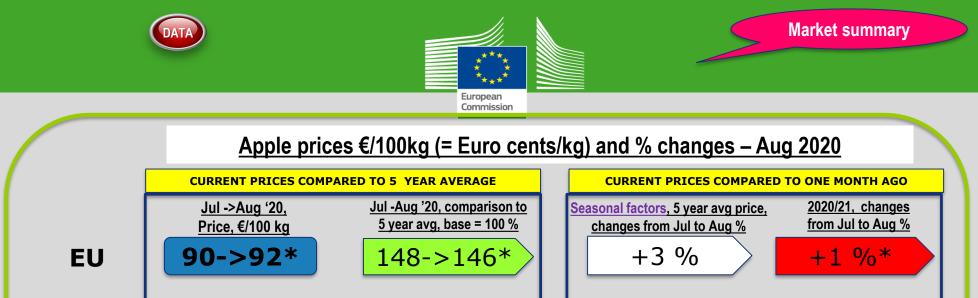

| | | | 0 | German | У | | | | | | |
|-----|---------|---------|---------|---------|---------|-----------------------|--------------------|------------|--|---|---|
| | 2014/15 | 2015/16 | 2016/17 | 2017/18 | 2018/19 | (Previous) 2019/20 | Current 2020/21 | 5 year a∨g | % current year to histo. 5 year avg | % to preceding month in 5 year avg | % to preceding month in current year |
| Aug | 32.67 | 41.42 | 31.89 | 54.33 | 86.98 | 41.58 | 78.16 | 51 | 153 | | |
| Sep | 29.56 | 43.74 | 39.37 | 73.28 | 69.76 | 52.32 | 79.36 | 56 | 142 | 9 | 2 |

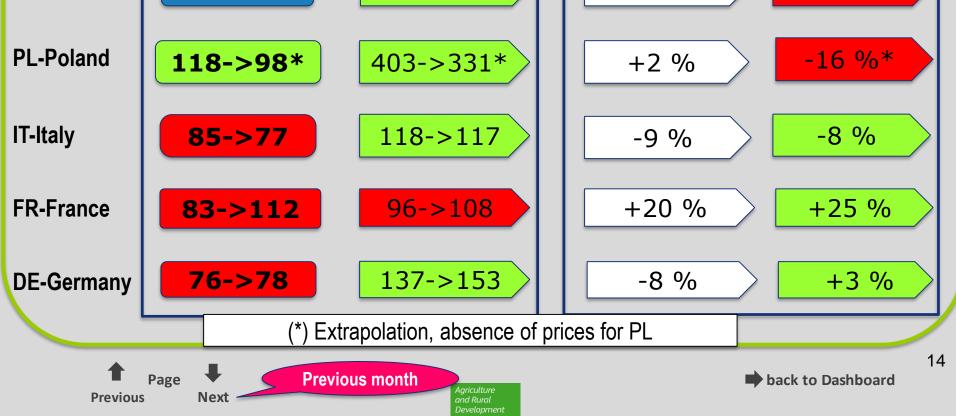

The monthly average price in Germany was 78 Euro cents per kg in August 2020 (column A). The equivalent price for September 2020 was 79 Euro cents per kg (column B). Therefore, the percentage change of prices (September compared to August) was a 2% increase (column F). We have 3 additional columns in order to check how the situation and recent price changes compare to the reference period (5 preceding years, 2015 to 2019). Column C indicates a figure of 153 for August; that means that the price of August 2020 was 1,53 times the price for the reference period in Germany. Column D indicates that the price for September 2020 was 1,42 times the price of the reference period. In column E we have a proxy indicator for price seasonality factors: for the reference period average German prices were 9% higher in September than in August (this is a sort of seasonal pattern that we take into account for column F). When results in column F are better than in E, the shape appears in green (in red in the opposite case).

World consumption of fresh apples 2019/20 (volume)

GENERAL REMARKS AND DISCLAMERS

1. Where the EU is listed it should be read as "EU+UK" since 1 February 2020. In a few cases there is a need to check on the content of the slide to distinguish between EU28 and EU27 because upgrade of apps may still be ongoing.

2. Due to different timings of data processing in different slides and some other factors, such as the intermediate data carrier and methodologies, some differences on figures referred to similar or almost identical indicators are possible.

3. This a working document intended for reflection and analysis not containing any official position of the European Commission.
