SUMMARY OVERVIEW, MARKET UPDATE & RECENT DEVELOPMENTS – Marketing year 2022/23

- 1. The ongoing crop 2022/23 for was initially estimated by WAPA at a volume very similar to the preceding crop; since the month of August 2022, however, several Member States registered additional drought and heatwave events that will result on smaller fruit sizes and, therefore, lower volumes. As soon as possible will now at which level below 12 million tonnes the EU crop volume will be.
- Provisional table on EU volumes Totable
- 2. In the case of Poland, the MS with largest volume, the need for adapting production to what is marketable, this is structural adjustments, has been confirmed once more. There are several provisional sources of information about the size of this crop; they point to a possible final estimate could be smaller than anticipated due mainly to labour shortages among other factors.
- More detail on the size of the Polish crop Totable
- 3. The volume of stocks on 1 December 2022 for the Member States that are the 10 most important producers was 4 419 513 tonnes, 9% below the level of the preceding crop.
- 4. The sector faces temporarily several challenges: 1) Rising input costs (especially energy and other farm inputs); 2) High costs on transportation; 3) Labour shortage (especially for harvesting).
- 5. These challenges are also accompanied by opportunities: 1) Moderate size of the part of the crop going to fresh consumption; 2) Measures being taken in order to allow for more reasonable energy prices for storing fresh apples and for facilitating apple processing;
- 3) Great export opportunities in the processing size in a context of a small crop in China (more than 50% of the world's production and consumption, a crop 9 million tonnes below normal levels) and very favorable exchange rates on both Dollar and Euro terms for exporting on the Polish currency;
- 6. In the apple for processing segment, apple concentrate sells well on world markets and is expected to remain at very good prices during the ongoing marketing year.
- 7. Given the relatively small volume of the product that can go to fresh consumption prices are significantly higher than during the preceding crop in most Member States.

THE METHODOLOGY FOR MONTHLY ANALYSING PRICES IS EXPLAINED IN THE NEXT SLIDE WITH AN EXAMPLE

PRICE ANALYSIS (SHORT TERM), AN EXPLANATION BY EXAMPLE

What is found in the colums of montly price figures?

- 1. Column A: average monthly prices for August 2020 by Member State and in the EU;
- 2. Column B: average monthly prices for September 2020 by Member State and in the EU;
- 3. Column C: index of prices for August 2020 compared to the average prices of the 5 preceding years (base = 100);
- 4. Column D: index of prices for September 2020 compared to the average prices of the 5 preceding years (base = 100);
- 5. Column E: percentage change of prices in September compared to August for the average price of the 5 preceding years (<>seasonal factors);
- 6. Column F: percentage change of prices in September 2020 compared to August 2020.

Example for German prices (September 2020)

				3erman	У						
	2014/15	2015/16	2016/17	2017/18	2018/19	(Previous) 2019/20	Current 2020/21	5 year avg	% current year to histo. 5 year avg	% to preceding month in 5 year avg	% to preceding month in current year
Aug	32.67	41.42	31.89	54.33	86.98	41.58	78.16	51	153		
Sep	29.56	43.74	39.37	73.28	69.76	52.32	79.36	56	142	9	2

The monthly average price in Germany was 78 Euro cents per kg in August 2020 (column A). The equivalent price for September 2020 was 79 Euro cents per kg (column B). Therefore, the percentage change of prices (September compared to August) was a 2% increase (column F).

We have 3 additional columns in order to check how the situation and recent price changes compare to the reference period (5 preceding years, 2015 to 2019). Column C indicates a figure of 153 for August; that means that the price of August 2020 was 1,53 times the price for the reference period in Germany. Column D indicates that the price for September 2020 was 1,42 times the price of the reference period. In column E we have a proxy indicator for price seasonality factors: for the reference period average German prices were 9% higher in September than in August (this is a sort of seasonal pattern that we take into account for column F). When results in column F are better than in E, the shape appears in green (in red in the opposite case).

2. PRODUCTION

- 2.1. EU production for MSs that are major producers
- 2.2. EU production by variety (%)
- 2.3. Extreme weather events
- 2.4. Apple stocks

POLISH APPLE PRODUCTION, ESTIMATES AND FORECASTS – Marketing year 2022/23

Current estimates for the Polish apple crop for the ongoing marketing year range from more than 4,5 Million tonnes to below 4,0 million tonnes, the final figure depending very much, among other factors, on the level of shortage of workers for harvesting.

World consumption of fresh apples 2019/20 (volume)

GENERAL REMARKS AND DISCLAMERS

- 1. Where EU28 is listed it should be read as "EU+UK"; since 1 February 2020 Comext data on EU27 is the standard default (1 January 2021 for Taxud data). In a few cases there is a need to check on the content of the slide to distinguish between EU28 and EU27 because an upgrade of apps may still be ongoing.
- 2. Due to different timings of data processing in different slides and some other factors, such as the intermediate data carrier and methodologies, some differences on figures referred to similar or almost identical indicators are possible.
- 3. This a working document intended for reflection and analysis not containing any official position of the European Commission.
