Chris Joosten, Head of product development

Studio Monton is a brand that looks at furniture as building blocks for your interior.

Creating pieces that adapt in shape, color and feeling.

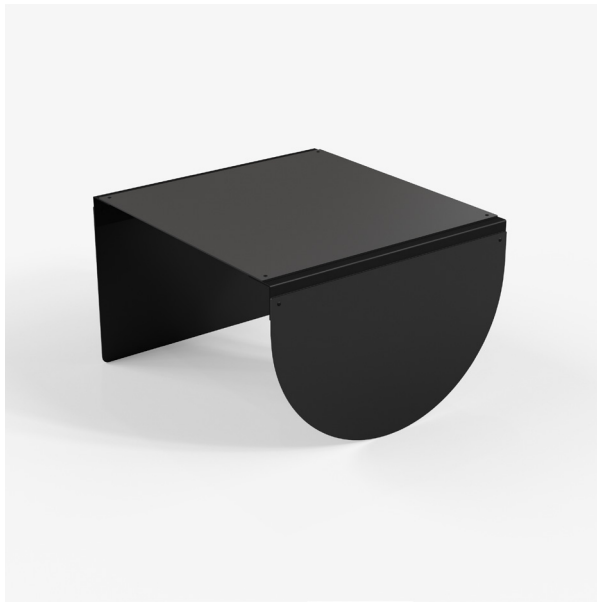

**Depending on your needs.
Having the ability to change with its environment to create a timeless product that you can share the beste experiences with.**

From having late night talks at the dining table to gathering around the coffee table.

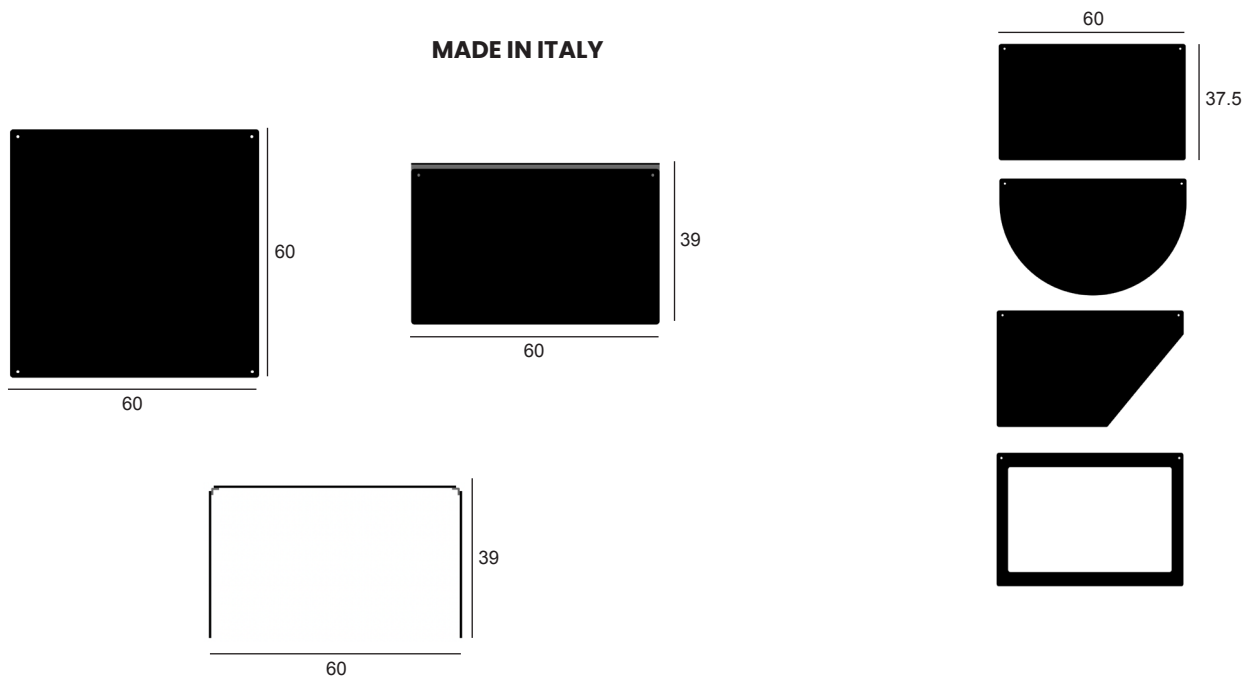

Furniture

Monton

Vienna Coffee Table XL / Laying the foundation for a new form of creativity.

Description

The Vienna coffee table was the founding piece that sparked the Monton philosophy. The design team was in Vienna when they noticed something special. The city acts like one large machine, that can be adjusted to the people's needs. From the early morning hours when kids are brought to school, too late at night when groups of friends try to walk straight after a good night at the local cafe. But throughout the day, one thing stayed the same. It always was about people connecting with each other.

This gave them the idea for a coffee table, "a place where everybody could gather around", which can change its appearance depending on the needs of the people and the space around them. This makes it a timeless piece of furniture that you can use on any occasion. From watching that important world-championship match, to a place to sit down and relax with a good cup of coffee.

Design

Studio Monton, 2020

Materials

~100% recycled steel

Construction

The metal sheet gets laser-cut by a state-of-the-art machine with a precision of 0.1mm. The shapes of the tables get perfectly aligned with each other to create as little material waste as possible. excess material always gets recycled. The corners of the table get bent by an automated robot to ensure a perfect 90° angle.

Sustainability

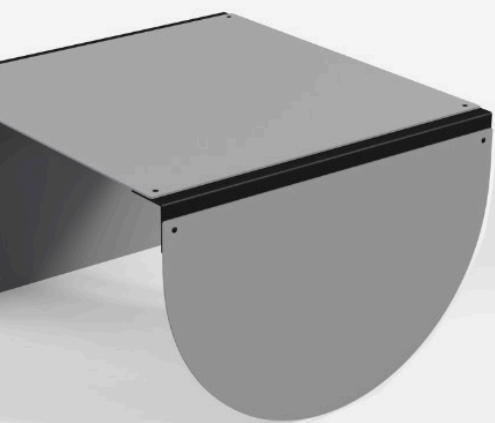

From laser-cutting to coating, it all happens within one factory to eliminate transportation emissions and save time so we can deliver you your product quicker. We use ~100% recycled steel for all components.

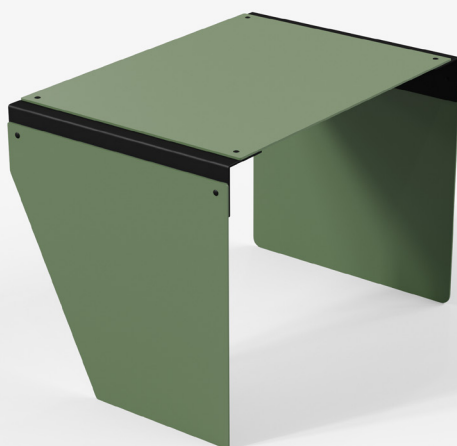

All equipment used for production runs on green energy. We even use green gas for our coating chambers to stay as efficient as possible. The table is shipped in a flatpack box to save on possible emissions during final transport.

MONTON

MADE IN ITALY

Porto chair / A new platform for creativity.

Description

The inspiration for the Porto chair was found in the famous Porto bridge, which connects the 2 city sides to each other. We saw the bridge as one flowing line, this formed the design for a shape that never seems to end. The back of the Porto chair is one flowing line that connects the frame to the backrest, just like the bridge that connects each side of the river to the other.

The purpose of the bridge is not bound to just one objective. It was designed to be used by pedestrians, the metro, cars, and much more. This made a perfect connection to our own design philosophy. We should not be bound by 1 view, but create different views to explore new perspectives. With this in mind, we designed 4 distinct looks that are instantly recognizable and can be matched with each other to create a playful look.

Materials

~100% recycled steel,
98% post-consumer recycled polyester

Construction

The metal sheet gets laser-cut by a state-of-the-art machine with a precision of 0.1mm. The shapes of the tables get perfectly aligned with each other to create as little material waste as possible. excess material always gets recycled. The corners of the table get bent by an automated robot to ensure a perfect 90° angle.

Sustainability

From laser-cutting to welding and finally coating. It all happens within one factory to eliminate transportation emissions and save time so we can deliver your product quicker.

MADE IN ITALY

Milano table / A place to come together with no obstruction in mind.

Description

The Milano table was created with one key principle, "A place to come together with no obstruction in mind." This is what we found in the Italian city of Milan. It serves as the second largest city in Italy, and for a good reason. From its historic center to the new business and innovation district. The city fabricated an atmosphere where all sorts of people can come together, from family visits to business trips.

This idea gave us the inspiration for a table that follows this same principle. This means no obstruction in the middle or on the sides, but space for everybody. So you can hold that long-due family dinner or that meeting with your friends to plan that trip abroad, or simply have a cup of coffee with your loved ones.

Design

Studio Monton, 2022

Materials

~100% recycled steel, 60% recycled oak wood

Construction

Leftover oak wood gets shredded down to flakes and compressed to a strong panel with biodegradable glue to ensure longevity and quality.

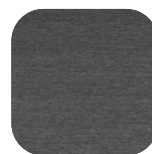

The table legs get made out of one c metal oval tube. Cut by a precision 3D laser. with an accuracy of 0.1mm. Finally, it gets coated to ensure a finish that can stand every occasion from spilling to scratches.

Sustainability

Made with one of the most environment-friendly materials available, wood. We use this material to insure a longer product lifetime. All equipment used for production runs on green energy. We even use green gas for our coating chambers to stay as efficient as possible.

Lighting

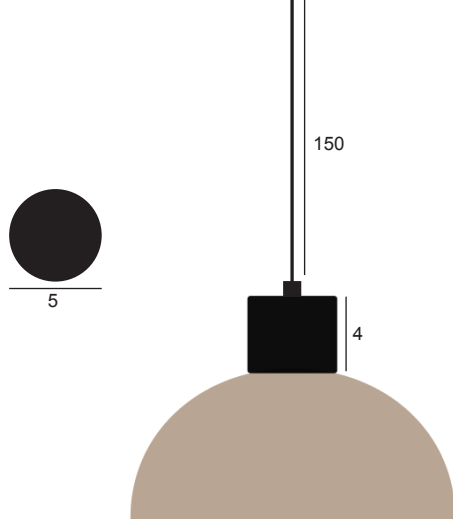

With the ability to create your own unique lighting fixture. We enable you to design everything just the way you want and give your space that extra finish that it deserves.

We know how hard it is to find the right shape that matches the aesthetics of your space. That's why we are giving you the option to choose from 6 different shades and our vast range of colors.

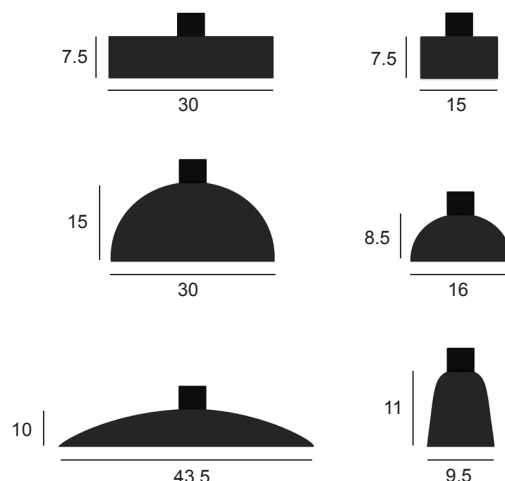

We see light as a material that is just as important as any other component within a lighting fixture. That's why we incorporate a state-of-the-art dim-to-warm LED light source. To build on creating that perfect environment for any situation.

Monton

MADE IN THE NETHERLANDS

Paris Pendant / One size doesn't fit all

Description

After the philosophy for Monton was founded during the design process of the Vienna coffee table, A new inspiration was just around the corner. While in Paris, the beauty and love for light became instantly apparent. From the night lights of the Eiffel Tower to the dimly lit corner cafes. This is where people came together to enjoy each other's company and laugh around their glasses of French wine for hours on end.

This concept of light had to be translated into a new design. So everybody could be able to experience this feeling.

It all starts with a **Built-in, dim-to-warm LED module.**

That enables a bright light for a work environment, but when dimmed back it transforms into a warm and cozy atmosphere. Combined with a wide range of possible shades, so everybody can find a shape that fits their space perfectly and can create a different environment for multiple occasions.

Design

Canopy

Included, black or white, H: 3,0 x Ø: 11 cm

Sustainability

From laser-cutting to coating. It all happens within one factory to eliminate transportation emissions and save time so we can get you your product quicker. Using ~100% recycled steel for all components. / **5-year warranty on LED**

All equipment used for production runs on green energy. We even use green gas for our coating chambers to stay as efficient as possible.

Construction

The aluminum tube gets precision cut and the top gets welded on by hand. The pendant is assembled by hand in the Netherlands by experienced craftsman. All shades are produced by forcing a metal plate into the desired shape by a high-precision spinning machine to ensure 100% accuracy.

MonTon

- **Good design**
- **Simplicity**
- **Functionality**

these 3 topics were the center of conversation during the design of SPLIT Candle Holder. The result speaks for itself. An object that adjusts to your needs whenever you want and it's available in a wide arrange of colors to fit any environment.

MADE IN ITALY

Split Candleholder / Adapting to your needs with a simple turn.

Description

Following the principles Studio Monton was founded upon, we needed to set a goal to create a design that exceeded expectations. The inspiration for the Split candle holder was gathered from the diversity we found in the Croatian city of Split. With the foundation laid thousands of years ago, it is a place that has evolved in many different ways. The city had to adapt itself to rapidly changing times on several occasions.

This gave us the idea for a candle holder that is representing "light & better times ahead" which can change its purpose according to the situations that are represented to it. Just by turning the split candle holder 90°, it can switch from being an ambient light on your coffee table to a romantic dining light for that special dinner you've been looking forward to.

Design

Studio Monton, 2021

Sustainability

We are proud to inform you that this product is made with zero-waste material. During manufacturing, ~100% recycled steel is used, and because the product is multifunctional it should last you a lifetime.

Construction

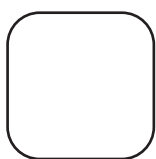

Hand-made using 2 high-grade steel tubes that are custom-made for the production of this product. The tubes get precision cut with a tolerance of 0,1mm and then hand-welded together by one of our skilled craftsmen.
